

What percentage of your suppliers do you currently get carbon data from?

What support, if any, do you provide to your suppliers to aid their ability to provide carbon data?

None (yet) - looking for options!

Series of carbon accounting workshops for suppliers

Nothing at the moment.

basic

None

Questions related to carbon accounting/reduction in TOMs procurement

none but talking about ways we can do this

none, we do procure through DCC however

Provide a link with some guidance

What support, if any, do you provide to your suppliers to aid their ability to provide carbon data?

Working with DCC on quantifying road maintenance projects

Provide template for highways works. Would like to look into more support

We haven't set a standard template or reporting methodology yet.

Have just completed a supplier survey, with support package coming from this.

prompting to use ecovadis.

We are getting a tool that is free for our suppliers to use and easy to complete - activity data based

Currently exploring this, may well provide them with a template workbook on a sector by sector basis. About to begin a 'market readiness exercise' to find out more about how suppliers in each sector are placed to provide and what they need.

Provide a data request form - only for fuel atm

Carbon accounting workshops with contractors planned.

What support, if any, do you provide to your suppliers to aid their ability to provide carbon data?

Ad hoc

What barriers are you facing in getting carbon data from suppliers?

Resource at supplier end

Availability of data

consistent reporting.

time and ability, burdens particularly from SME's

Consistent definition of calculation boundaries

Knowing where to begin, what to ask for, what data will be valuable, and what is reasonable to ask suppliers

They are way behind on their carbon reporting journey

Internal challenges in asking for information in a consistent format.

Resources and time availability from suppliers

What barriers are you facing in getting carbon data from suppliers?

complicated, resources, comparing apples v oranges etc

Some do not respond to data requests.

Consistency in approach

suppliers all at different stages. SMEs zero

challenges of scope they are calculating themselves.
Contacting the right person at the supplier. Resourcing within the supplier
Not asked for within the contract

Lack of knowledge from suppliers around this whole area -
Carbon literacy is very low

procurement team not asking for it. Consistency. Knowledge and capacity within suppliers

Haven't yet worked out exactly what we want to ask (ie. just their scope 1 and 2, or should we include some of their scope 3?)

Effective contract management, available resource, internal engagement

What barriers are you facing in getting carbon data from suppliers?

Internal capacity to check/validate data. SME suppliers limited capacity to provide it. Difficulties around carbon factors for provision of services rather than goods.

Knowing what to ask and they understanding how to find the data.

GHG Protocol Scope 3 Corporate Standard

Storing and analysing data on our end

GHG Protocol Scope 3 Corporate Standards

We need a standardised/ replicable methodology for carbon reporting and need to avoid placing a burden on small companies.

Procurement asking the questions and suppliers understanding what is being asked and where to find the data

Are there any training courses you would recommend for Scope 3 accounting?

No - but I'd like to know about them!!

that is a great question

I actually do a lot of this under Tevi (UoE) and also privately too!

I expect the Carbon Trust will provide them
