

What type of organisation are you part of?

What is your role title?

What are the trends you have noticed in adaptation over the last year?

link to health

More connections to
health

Greater stakeholder
engagement

far greater awareness at
community level

Health

political discourse

Bottom up not top down

Real notice of increase in
flooding and need for
urgent action

What are the trends you have noticed in adaptation over the last year?

Lack of action

Not quick enough

Complacency. Inadequate
response to accelerating
threat

overheating!

Increasing understanding
around the intersection with
equality issues.

Very slow to start

Co-benefits

focus on co-benefits

What are the trends you have noticed in adaptation over the last year?

consideration of
compound impacts

Greater recognition of its
importance

Being deemed less in
importance vis-a-vis
mitigation/Net Zero in policy
realms

Rising awareness

more emphasis on
adaptation over
mitigation, adaptation
pathways

Climate impacts
increased

Greater regulatory
engagement

The penny dropping that
there is more of a need for
parity with mitigation

What are the trends you have noticed in adaptation over the last year?

more messaging around
how people can stay cool

Lack of political
understanding

Slow burn awareness
raising (pun intended)

Slowly gaining traction

Continuing trend in lack
of funding for adaptation
measures

More focus is emerging on
community roles over
individual and business
responsibilities

Increase in concern

WG Climate Adaptation
Strategy

What are the trends you have noticed in adaptation over the last year?

Political discourse

The pace of climate impacts have necessitated much thought in some parts of the sector on how to work meaningfully at this point.

Expectation to deliver a fairer society

Fear about talking to communities about adaptation.

Community engagement

An understanding that we need to adapt

Emergency response not adaptation plans

Growing awareness of need for adaptation

What are the trends you have noticed in adaptation over the last year?

Climate trends
interconnected with
social and economic

Disconnect between
severity of impacts and
actual action

newsletters

Carbon brief

Where do you currently access information/news on adaptation?

What should be the top priority for climate adaptation over the next 12 months?

What is the one thing that you would love everyone to understand about adaptation?

It's essential

it's necessary and fun

Its everyone's
responsibility

its about protecting our
future

Mitigate adapt or suffer

It's not a choice!!!!

Everyone has something
more to add. No matter
how small.

Enables all life to thrive in
the face of climate
breakdown

What is the one thing that you would love everyone to understand about adaptation?

That good local relationships are a great place to start.

it should be part of every project / plan / strategy we do, not just an environment problem

The relation between climate trends and socio-economic conditions

its a deliberative process

Should have got the mitigation done first...

There are some easy changes in people's lifestyles that can enable more effective adaptation

it's positive and part of an equitable society

Be ready to change and challenge typical attitudes and practices

What is the one thing that you would love everyone to understand about adaptation?

There is a point beyond which we cannot adapt

You wouldn't go to the pool without your cozzie!

ALL of us have to learn how to adapt

it's a non-negotiable

The cost of not doing it is more expensive than maintaining the status quo

Action is needed now

Evolution

Adaptation is as important as mitigation

What is the one thing that you would love everyone to understand about adaptation?

It has lots of co-benefits

Can't build your way out of a problem by building more of why we're here in the first place

Communities can be involved in solutions and these can help communities to thrive.

Existential risk due to global economic system

Scale and pace needs to increase.

Get on with it

Utterly vital. Adaptation is what you do to stay alive long enough to get to net zero

Sometimes less is more

What is the one thing that you would love everyone to understand about adaptation?

Positive outcomes
needed now for future
survival

Fixing climate, is fixing us
- climate is health
