

How familiar are you with...

How do (or could) threats to digital resilience affect your work?

That digital resilience is a threat. Data centres will be put ahead of agriculture for water demand.

everything on line

significant

being able to communicate effectively

losing access to relevant systems and data bases

Would have a massive impact

Lack of system control

significant impact on ability run services

How do (or could) threats to digital resilience affect your work?

Being able to work effectively around climate change

disrupted access to software meaning I can't work

Data loss

Everything I do is based online. If there was a threat I would not be able to work!

Ability for people to work remotely

Potentially catastrophic in the health and care sector

communication and data loss

Balancing digital needs with climate needs, amenity, water etc.

How do (or could) threats to digital resilience affect your work?

Enabling IT to be accessible
unthreatened by terrorism
and extreme weather

unable to deliver health
services

Inability to respond to
emergency situations
through lack of
communications

EHR

May fundamentally change
the way we need to design
our services. For example
cloud rather than on premise

Food , energy, water &
communications - all would
be negatively affected

Significantly systems,
email, working remotely

impact of data loss

How do (or could) threats to digital resilience affect your work?

Cascading risk and unforeseen impacts

Significant, impacting on all parts of the Trust, impacting patient care.

Responding to climate emergency, and emergencies

Inability to deliver systems to the services in our org. Damage to infrastructure putting services at risk

All machinery being moved to AI and automated, no human back-up.

Shut down access to healthcare records. Everything is digital. We rely on it and without it slows down processes

Co-existence of climate/weather extremes + digital collapse

Systems, databases communication, email remote working

How would you rate your organisation's considerations of digital resilience in the following categories?
